

MINI VAULT/FR

OPERATION & INSTALLATION GUIDE

MODEL PURCHASED:

SERIAL NUMBER:

DATE OF PURCHASE:

We recommend that you read the entire manual carefully. If you have purchased an electronic safe then registration is a condition of ongoing support.

What have you received?

Please check carefully that you have received the following items. If not, please contact your supplier.

- 2 keys, only if your safe is equipped with a key lock.
- 1 battery (the battery could already be fitted by the factory), only if your safe is equipped with an electronic lock.
- Fixing set.
- A shelf and shelf supports, if your safe is equipped with a removable shelf.
- Motion sensitive light.

What can you store in this safe?

- Jewellery.
- Cash.
- Credit cards, cheques.
- Passport, driving licence, birth certificates.
- Insurance documents etc.

Please note that this product is not designed to protect computer media. Depending on where you locate your safe, it may be subject to humidity. Stamps and other delicate items should therefore be stored in an airtight container before being put in the safe.

KEY LOCK

Opening and closing the safe.

Please check that the safe works correctly before installing it or securing items inside.

Opening:

- Insert one of the keys supplied in the keyhole. Note: the key only fits the keyhole in one position: do not force it!
- Turn the key clockwise until it stops. Do this gently. The door can now be opened by pulling the key or handle towards you.
- The handle is fixed and designed to assist with opening the door it does not retract the bolts.
- With the bolts retracted the keys cannot be removed.

Closing:

- Ensure that the bolts are not protruding (the bolts are the metal pins which protrude from the side of the door and thus secure the safe). If necessary, turn the key clockwise to retract the bolts.
- Gently push the door shut. Now turn the key anti-clockwise until it stops.
- Now remove the key from the keyhole and store it safely away from the safe.

Note we recommend that the spare key is not kept in the safe.

DIGITAL ENTRY PAD

Battery Installation/Replacement.

Important: For indoor use only.

Battery Low Voltage: $5.2 \pm 0.2V$. The display will alert low battery when battery voltage reaches $5.2 \pm 0.2V$. **Please replace the battery immediately.**

Battery Replacement Instructions:

One 9V alkaline battery is installed in the Battery Management compartment in the bottom of the EntryPad.

- To replace/install the battery, follow these steps:
 - Release the latch of the battery compartment, by pulling lever downward, see Fig. 2.

– Pull out the battery compartment from the bottom of the Entry Pad, see Fig. 3.

– Take out the battery and replace with a new 9V alkaline battery (Duracell and Energizer brands are recommended). The battery compartment will receive the battery, orienting the positive and negative terminals correctly, see Fig. 4.

– Put the battery compartment back into the entry pad. Push up the latch of the battery compartment until it snaps closed, see Fig 1.

DIGITAL ENTRY PAD

Functionality and Operation.

Features:

1. Manufacturer default code is 1-2-3-4-5-6

Function of Code

- a) Unlock safe lock system
- b) Change code

Operation

The lock when first used will be set to its default code 1-2-3-4-5-6. Enter the 6 digit code, each entry will be accompanied with a beep and a final single beep when the correct code is used. Multiple (3) beeps at the end of the code indicates incorrect code. Once the correct code has been entered move the handle from a horizontal to downward vertical position and gently pull to gain access.

Wrong Entry Penalty

Entry of four (4) consecutive invalid codes results in a 5-minute penalty time period.

- a) The unit beeps at 5 second intervals indicating that it is still in the penalty time period.
- b) While the system is in penalty time, the entry pad buttons remain unresponsive. Pressing buttons during penalty will not restart or lengthen the penalty time period. It will continue to count through the 5 minute penalty time period.
- c) While the system is in penalty time, removal of the batteries will interrupt the penalty time countdown. Upon reinstallation of the batteries, the entry pad continues to count down until the 5 minute penalty time period expires.

Standby Status

In order to conserve battery power, the system will revert to standby status if there is no key press within 10 seconds. Standby status is indicated by two short beeps.

Automatic Re-lock

The safe lock system automatically relocks after 6 seconds of being opened by a valid code.

Low Battery Alert

- a) Repeated beeping (8 beeps) during an unlock operation indicates that the battery is low and needs immediate replacement.
- b) The manufacturer recommends the use of a 9-Volt standard alkaline battery (Duracell or Energizer brands are recommended) replaced annually.

DIGITAL ENTRY PAD

Programming.

User Programming Instructions.

1. Always perform these operations with the safe lock unlocked and the safe door open.
2. Before closing the door, make sure all the program changes are correct.
3. The system will not allow the user code to be set to six zeros.

Changing Code

- a) Enter “0” six times. A single beep will sound, indicating the entry is valid and the system is awaiting the code change.
- b) Next, enter the existing six (6) digit code. A single beep will sound, indicating the entry is valid.
- c) Enter the new six (6) digit code. Two beeps will sound, indicating the entry is valid.
- d) Re-enter the new six (6) digit code. One beep will sound, indicating the codes entered in steps c and d are the same and the code changing process is successful.
- e) If three beeps sound, the code change process has been unsuccessful. The existing code is still valid. Repeat steps a to d.

Note:

- a) Test the new code at least 3 times before closing the door to make sure the code has been programmed correctly.
- b) The system will revert to standby status if there is no key press within 10 seconds. Standby status is indicated by two short beeps.
- c) Do not forget to register your safe (page 11).

SPECIFICATIONS:

Power Supply: DC 9V

Standby Current : <50µA

Battery Low Voltage: 5.2±0.2V

Working Humidity (max): <90%

Mechanical System Life Span: >100,000 Cycles

Power Supply Range: DC 4.5V-12V

Active Current: <20mA

Working Temperature: 0 ~ +49°C

Code Length: 6 Digits

INSTALLING YOUR MINI VAULT

The Securikey 'Mini Vault' series of safes are designed to be positioned and secured to either floor and/or wall.

Please read all instructions before commencing installation!

Location:

The decision on where to site and install your safe should take into consideration its concealment and make possible attack methods more difficult. Where possible site the safe so as to restrict access to the bottom, sides and top. When fixing a safe to the floor up and against a wall, any obstacles such as skirting board should be removed so there is no gap between the back of the safe and the wall.

Select a good, sound, level wall and/or floor to which to install your safe, ensuring that no services such as gas/water pipes will be interfered with.

The safe must be anchored to the floor or to the wall (preferably both) and there are fixing holes provided for this purpose in the base and back of the safe. The type of fixing bolt to be used depends on the structure to which the safe is to be anchored. The safe is supplied with commonly used concrete anchor bolts. Should it be necessary to affix to structures where other types of fixing are better suited, it will be necessary to buy specific fixing bolts, which can normally be found in any hardware store.

Anchoring procedure:

- Place the Mini Vault in the desired location and check that full access to the safe will be possible when installed. Noting the white operation and serial number sticker on top left side
- Using the safe as a template, mark the fixing position on the surface to be drilled.
- Using a 10mm concrete bit, drill holes to a depth of 75mm.
- Remove the dust from the hole using a vacuum cleaner.
- Reposition the safe and insert the fixing bolts through the safe body and tighten as necessary.

In order to fulfil requirements of the EN Certification your safe must be anchored to a concrete floor or concrete wall with a minimum of 2 fixings.

INSURANCE CERTIFICATION

This certification confirms that the products listed below
are designed to provide overnight cash cover of

£4,000 (x 10 valuables)

Provided the unit is installed in accordance with our instructions

SECURIKEY®
The key to security

Springlakes Industrial Estate, Deadbrook Lane,
Aldershot, Hampshire, GU12 4UH
www.securikey.co.uk

This cash rating certificate is designed as a guide only and as with all safe
manufacturers we advise you consult your insurer to ensure their full approval
of location and suitability for the goods insured by them.

MAINTENANCE

- When closing the door, there should never be anything between the door and the safe (eg a paper clip). The bolts must be fully retracted.
- Do not fill the safe to such an extent that it is hard to close the door. The locking mechanism could then seize up as a result of pressure on the inner plate.
- Ensure that the key in the door does not hit a wall when opening. This can cause the key to snap, and can damage the mechanism. The use of a distorted key can damage the lock.
- If you find that the lock becomes harder to open or stiffer, never use oil or graphite powder to 'lubricate' the lock. This can make the tumblers sticky, which could prevent the lock from opening at all. Your supplier can advise you on the correct cleaning product to use.
- The outside of your safe can be cleaned with a slightly damp cloth. Never use chemical cleaning agents.
- Always use new 9V Alkaline batteries.

TROUBLESHOOTING

Although your safe has been manufactured with the greatest care, a fault may nevertheless occur, such as:

- The locking mechanism does not work.
- You cannot open your safe.
- Faulty lock.
- You lose your key.
- You forget your code for a digital lock.

The most important rule is not to try and force anything. The locking mechanism in particular is made of precision components which can be damaged.

STANDARD 12 MONTH WARRANTY TERMS

1. All claims under the warranty must be accompanied by proof of purchase.
2. Claims under the warranty must be made to the dealer from which the unit was purchased.
3. The warranty applies only to the initial purchaser and is not transferable.
4. The warranty does not apply in the event of damage or faults which are the result of:
 - a) Accidents, misuse, wear and tear, neglect, wilful damage, fire or malicious attack.
 - b) Incorrect installation and/or use in a manner which conflicts with the relevant legal, technical and/or safety standards.
 - c) An unauthorised modification.
 - d) Repairs carried out by anyone other than an authorised dealer or the manufacturer.
 - e) Negligent transportation without appropriate packaging or protection.
 - f) The incorrect programming of numerical, combination and/or electronic locks.
5. No claim will be accepted under this warranty involving losses occurring in transit.
6. Batteries and faults caused by incorrect insertion or use of batteries with the wrong voltage are excluded from the warranty.
7. The warranty gives no right to reimbursement of any loss apart from the replacement or repair of the faulty parts. The manufacturer cannot be held liable for any consequential loss or any other consequences caused by or connected with the products supplied by it, including loss or damage to items stored in it by theft, fire, water ingress, condensation, chemical attack or other means.
8. The costs of shipping, packing and shipping insurance will always be borne by the customer.
9. Only the manufacturer may amend the conditions of this warranty.
10. Repairs or site visits that are not covered under this warranty will be chargeable. Please first clarify with your dealer whether your claim is covered by warranty.

In the unlikely event of a fault developing, please contact your supplier.

DIGITAL SAFE REGISTRATION & SUPPORT PROCESS

This registration process is specifically designed for consumers who have purchased a Digital keypad safe. While we are happy to assist consumers who have purchased a key locking unit, they will not need to complete the registration form, but instead use our website to increase the standard 12 month warranty to 24 months.

Why Register

Once the digital safe has been installed and you are happy with its operation and the code change process, it is time to register the unit with Securikey. This registration will ensure that should you have any difficulty in operation, forget your code or struggle to program the lock, we can always get you in. Each safe is programmed with a default code 1-2-3-4-5-6 and has a hidden master code held by us in a secure database (every safe is different).

Familiarity

The lock inside the safe door and the safe body each have a white sticker bearing the same 20 digit serial code, this ties the 2 items together. Included in the plastic bag with this set of instructions you will have seen a blue label for your use with the same 20 digit number :

Example

Completion of Registration Card

On the page opposite you will see a registration card forming part of the cover. Cut along the line indicated and complete the details with whatever you feel appropriate. Attach the blue sticker, if it has not already been done, to the registration card (noting the serial number on the front cover of these instructions in the space provided).

Place the card in a plain envelope, apply appropriate postage and return to the address indicated in Aldershot.

While we will not acknowledge receipt of registration, you can contact us to receive confirmation.

Should you require any future assistance in operation, code change or the use of the Mastercode then a phone call armed with the appropriate serial number and your personal details including security question response will be required.

NB. It is possible to change the Mastercode from that held on our database but we will not be able to assist you in operation or override should you choose to do this.

NOTES FROM SUPPORT CONVERSATIONS WITH SECURIKEY

REGISTER YOUR PRODUCT

SERIAL NUMBER*:

To ensure we can provide you with an override code in the case of lockout it is important that you register your details upon purchase. The override code will only be released to an authorised owner/supplier once security checks have been completed to our full satisfaction.
